

## WHAT IS

# IGLA

The IGLA system protects your vehicle from theft using innovative digital blocking technology that starts and stops your engine. It protects against all methods of vehicle theft including relay attack, key cloning, and more.

The unique security features of the IGLA is that it is undetectable from all modern day cloning devices, as the device is in a dormant state until the engine has started. In other words it does not let off any signals that can be copied or located by other devices.

Vehicle owners, can disarm the system by using their unique personalized PIN-code. The pin is constructed with the factory existing controls no visual changes to the vehicle, no aftermarket keypad required.

## IGLA

# Advantage VS Tag and GPS

IGLA prevents the car from being stolen. Tag and GPS tracking are recovery tools. Most vehicles are not recovered, and owners are out of pocket for paying the deductibles.

Cars are still being stolen with Tag and GPS systems. The high amount of car thefts makes it impossible for Police to prioritize the recovery of all vehicles before they reach containers and are shipped out of the country. Vehicles are not stolen with IGLA.

IGLA, anti-theft system, blocks the engine through intelligent algorithms, overriding the activation systems and ensuring the vehicle can not be driven without system activation.

The cost of the IGLA is lower than most insurance deductibles. There is a one time fee that never expires and has no location limitation.

COMPARISON	IGLA	TAGS	GPS	ALARMS
Protection location and Range	Limitless	North America	Relies on Satellite line of sight	Limitless
Cost	900-1200	400	150-400+ Monthly	700-1200
Car Lifetime protection	✓	5 Years	Subscription	✓
Protection against: Remote Theft, Jamming and Blocking	✓	✗	✗	✗
Protection against: Relay Amplification Attack	✓	✗	✗	✗
Protection against: OBD II Cloning and Key Reprogramming	✓	✗	✗	✗
CAN/ULC - S338-98-R2018 Compliant	✓	✗	✗	✗
Eliminates Recovery and Car Replacement costs	✓	✗	✗	✗

## Key Features

### Engine/Transmission Blocking

The engine and automatic transmission are locked without intervening car controls or circuits.

### Authorization and Deactivation

For system authorization vehicle owners use PIN-code

### Safe For Car

It will not interfere with its regular functions.

### User-Friendly Service Mode

There's no need for anyone to know about the device – simply activate service mode when car needs servicing.

### Passive Arming

When you leave your vehicle parked the system is ready and armed. No need to remember to activate.

### No Monthly Fees, Payments or Expiration

Once installed, IGLA systems do not incur monthly fees, and there are no additional payments

## How Does It Work?

IGLA device works by preventing engine ignition. A combination code is required. This personalized code uses the vehicle's switches or buttons on the dashboard or steering wheel.

IGLA is user-friendly

Small in size IGLA can be hidden almost anywhere in the car making it difficult for thieves to locate, it's like looking for a needle in a haystack.
